

CAFT Agent Audit — Trivia Game Experiment

CAFT Agent Monitoring Audit | March 29, 2026 | 7 sessions analyzed

5	0	2	43
Healthy	Degraded	Problematic	Total Anomalies

Estimated Impact

Based on 7 sessions analyzed, **29%** showed anomalous behavior with an average detection delay of **18 minutes**. Projected at 50 sessions/week with 5 developers, this represents approximately **4.3 wasted hours/week**, or **\$6,867/month** in unproductive agent time (at \$75/hr loaded cost).

Session Details

Status	Session	Events	Anomalies	Action MI	Issue

OK	22499017-5	7	0	1.25b	
OK	3b21bc37-b	73	0	0.95b	
OK	551241a1-5	63	0	1.58b	
OK	6645322b-3	21	0	2.35b	
OK	7bb6c030-b	60	0	1.87b	
FAIL	aee33a4b-8	4	0	0.25b	

Recommendations

1. Set up continuous CAFT monitoring to detect anomalies in real-time.
2. Review problematic sessions — anomaly signatures indicate specific failure modes addressable through better prompting or task decomposition.
3. Multiple repetition anomalies suggest adding retry limits or verification steps to agent workflows.
